# The cost of starting a company **just collapsed.**

AI has democratised building. A single founder can now design, build and ship what used to take a funded team, and a new wave of early-stage founders is the result. It is accelerating, and they are making their first financial decisions right now.

## DEMOCRATISED BUILDING

### Anyone can ship

AI and no-code tools have removed the technical barrier. An idea becomes a live product without a dev team.

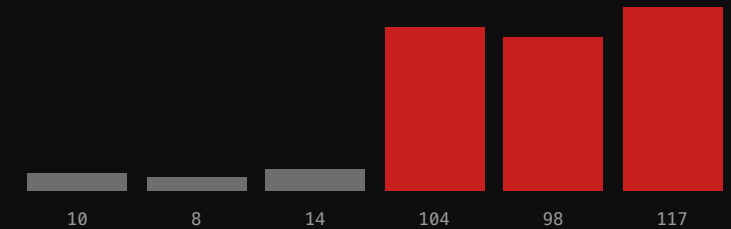

## AN AI-NATIVE WAVE

### More builders than ever

Solo founders and small teams use AI to go from idea to launch in weeks, not quarters. The volume is rising fast.

## THE LAST SIX MONTHS

### About **10x** the requests

New member requests / month, last six months.

They go global from day one, and they are choosing their financial stack now. The window to become their default is open.

THE THESIS

# You back founders building *borderless* businesses. **So do we.**

Bali has quietly become a real hub for global-first startups. BSTC is its centre of gravity: 2,500+ founders, engineers and operators, most of them running cross-border, multi-currency businesses from day one. That is your customer, in one room, every month.
